Specialty Valves

Steam Applications

Steam Service valves are provided with high temperature seats and a graphite stem packing for use with saturated steam up to 250 psig. High temperature end connector gaskets are also provided for 1-1/4" – 2" sizes. Comes with a Stainless Steel ID Tag fastened to the mounting pads.

Safety Exhaust Valves

Available in Stainless Steel, Carbon Steel and Bronze. 1/4" to 2" Automatic Drain Valves are an important safety feature for compressed air applications with downstream pneumatic equipment. A conventional shut off valve can trap compressed air in pneumatic equipment, which could create a potentially dangerous situation. Lance Automatic Drain Valves allow the down stream pressure to be released when the valve is in the closed, "off" position.
